

Connecting Utilities

Houses usually have a supply of electricity, gas and water.

Electricity, gas & water are called **utilities**.

Three houses are going to be built.

Each house needs to be connected to all three utilities.

However, none of the supply lines are allowed to cross each other.

Your mission is to connect the three houses to the three utilities.

To make the task easier, you can place the houses and utilities anywhere that you choose on your piece of paper.
